AB The present invention comprises homeopathic preparations of growth factors, cyclins, and methods for their use. Disorders which may be effectively treated with the compositions of the present invention include chronic viral disorders, such as HIV, AIDS, chronic fatigue syndrome and Epstein-Barr viral infections, cancer, diabetes, depression, and autism. Homeopathic preparations of growth factors and/or cyclins are preferably administered orally. In an alternative embodiment, patients are treated with radio frequency signals corresponding to homeopathic dilutions of growth factors.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

NOVELTY - A homeopathic preparation (I) comprising a homeopathic potency of purified growth hormone, is new.

ACTIVITY - Nootropic; neuroprotective; antiparkinsonian; osteopathic.
No supporting data given.

MECHANISM OF ACTION - Growth promoter; regulator of cell growth and differentiation.

Studies were conducted on healthy adult subjects to ascertain the effect of various potencies of recombinant human growth hormone (rhGH). Three studies were conducted in the format of double-blind, placebo controlled studies (DBPCS). In the first study, which was a thirty day DBPCS, subjects were randomly divided into two groups; one group received a combination 6C+100C+200C **homeopathic** hGH formulation and the other group received placebo. In the second study, individuals were given a placebo in a bottle and instructed to take one chewable tablet three times per day for seven days and after seven days of treatment, subjects were given a bottle which contained a single potency of either 6X or 6C or placebo. The third study was a placebo controlled study with crossover after 21 days to the opposite test substance. A group initially received placebo and after 21 days received treatment with a **homeopathic** preparation. Blood samples were taken from all the groups to determine serum **IGF-1** levels. Reproducible rises in serum **IGF-1** were observed in all three studies.

USE - For modulating the effects of aging and for modulating lean body mass (claimed). (I) has significant anabolic and anti-catabolic effects on the body and is useful for increasing serum **IGF-1** levels, lean body mass, muscle mass, libido and sex hormones, energy levels, cartilage strength, and size and function of the thymus, spleen, treating growth deficiency disorders, improving cardiovascular function, endurance, skin tone, lipoprotein balance, fatty acid levels, and cholesterol profile, enhancing immune system function, promoting hair growth and color change, reducing blood pressure, joint, back and knee pain, bleeding of the gums, nasal and sinus congestion, and fat, in particular, hip size, upper arm size and waist size. (I) is also useful for improving short term memory, reducing the manifestations of anger, anxiety, depression, social isolation, mood swings and sleeping disorders, improving vision, removing wrinkles, accelerating wound healing, facilitating breast enlargement and generally contributing to a feeling of well-being. (I) may also be useful to treat headaches, AIDS wasting syndrome, Turner syndrome, osteoporosis, Parkinson's, Alzheimer's disease and dementia.

ADVANTAGE - (I) is non-toxic, do not produce undesirable side effects and can be formulated and provided to a large patient population at a reasonable cost by means of delivery systems that are convenient and safe.

ACCESSION NUMBER: 1996-61128 VETU

TITLE: Determination of pre-clinical effects and clinical efficacy
of organ preparations.
(Praeklinische wirkungs- und klinische wirksamkeitsnachweise
von organpraeparaten)

AUTHOR: Schmid F

LOCATION: Aschaffenburg, Ger.

SOURCE: Tieraerztl.Umsch. (51, No. 2, 63-68, 1996) 4 Fig. 5 Tab. 9
Ref.

CODEN: TIEUA7

AVAIL. OF DOC.: Ziegelbergstrasse 17, 63739 Aschaffenburg, Germany.

LANGUAGE: German

DOCUMENT TYPE: Journal

FIELD AVAIL.: AB; LA; CT

AN 1996-61128 VETU

AB The Author discusses the effects and clinical efficacy of organ
preparations, including growth factors, cytokines and peptides, such as
osteoinductive factor (OIF), osteogenin, bone morphogenic factor (BMF),
transforming growth factor (TGF), bone-derived growth factor (BDGF),
platelet-derived growth factor (PDGF), insulin-like growth factor (IGF),
nerve growth factor (NGF), brain-derived neuronal factor (BDNF), ciliary
neurotrophic factor (CTTF), ganglion/facial motorneurone factors,
neurotrophin 3 (NT3), basic fibroblast growth factor (bFGF) and epidermal
growth factor (EGF) and various activating factors (interleukins, IL,
mitogenic factors, complement components, transferrin), suppressing
factors (inhibiting factors, IFN, c-reactive protein, alpha feto protein,
fibrinogen), factors of inflammation and direct acting factors.

ABEX Organ preparations include unprepared or processed organs, tissue
cells, **homeopathic** preparations, cell fractions and enzymes.
Bone-derived growth factors include OIF, osteogenin, BMF-1, 2, 3, TGF-1,
2, alpha/beta FGF, BDGF, PDGF and **IGF-1**, 2.
Activating factors include IL-1, 2, 3, complement components,
transferrin, mitogenic protein and normal macrophage, C-cell activating,
thymus differentiation, mitogenic-blastogenic, T-cell-derived enhancing
and thymus-extracted fractions. Suppressing factors include DNA
synthesis inhibitors, antibody inhibiting material, soluble immune
response suppressor, immunoregulatory alphaglobulin, IFN, alpha feto
protein, LDL, c-reactive protein, fibrinogen, normal immunosuppressive
protein, low molecular weight suppressor and histamine induced
suppressive, T-cell suppressive, lymphoblastogenesis inhibiting, feedback
inhibiting and migration inhibition factor (MIF)-inhibiting factors.
Growth factors affecting nerve tissue include NGF, BDNF, CNTF, ciliary
ganglion/facial nerve motorneurone factors, NT3, PDGF, bFGF and EGF.
Factors of inflammation include pyrogens, slow reacting substance of
allergy, TX, PG, LT, IFN, MIF, macrophage activating/enhancement factors,
fibroblast activating factor, eosinophil stimulation promotor and various
blood cell inhibition and chemotactic factors. Direct acting factors
include lysosomal enzymes, lymphotoxin, (macrophage) cytotoxic factor,
adherent cell toxin, microbial factors, leucoregulin, and macrophage
cytolytic, proliferation inhibiting, cloning inhibition and tumor
necrosis factors.

AB The present invention comprises homeopathic preparations of growth factors, cyclins, and methods for their use. Disorders which may be effectively treated with the compositions of the present invention include chronic viral disorders, such as HIV, AIDS, chronic fatigue syndrome and Epstein-Barr viral infections, cancer, diabetes, depression, and autism. Homeopathic preparations of growth factors and/or cyclins are preferably administered orally. In an alternative embodiment, patients are treated with radio frequency signals corresponding to homeopathic dilutions of growth factors.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

NOVELTY - A **homeopathic** preparation (I) comprising a
homeopathic potency of purified growth hormone, is new.
ACTIVITY - Nootropic; neuroprotective; antiparkinsonian; osteopathic.
No supporting data given.
MECHANISM OF ACTION - Growth promoter; regulator of cell growth and
differentiation.

Studies were conducted on healthy adult subjects to ascertain the
effect of various potencies of recombinant human growth hormone (rhGH).
Three studies were conducted in the format of double-blind, placebo
controlled studies (DBPCS). In the first study, which was a thirty day
DBPCS, subjects were randomly divided into two groups; one group received
a combination 6C+100C+200C **homeopathic** hGH formulation and the
other group received placebo. In the second study, individuals were given
a placebo in a bottle and instructed to take one chewable tablet three
times per day for seven days and after seven days of treatment, subjects
were given a bottle which contained a single potency of either 6X or 6C or
placebo. The third study was a placebo controlled study with crossover
after 21 days to the opposite test substance. A group initially received
placebo and after 21 days received treatment with a **homeopathic**
preparation. Blood samples were taken from all the groups to determine
serum **IGF-1** levels. Reproducible rises in serum
IGF-1 were observed in all three studies.

USE - For modulating the effects of aging and for modulating lean
body mass (claimed). (I) has significant anabolic and anti-catabolic
effects on the body and is useful for increasing serum **IGF-1**
levels, lean body mass, muscle mass, libido and sex hormones,
energy levels, cartilage strength, and size and function of the thymus,
spleen, treating growth deficiency disorders, improving cardiovascular
function, endurance, skin tone, lipoprotein balance, fatty acid levels,
and cholesterol profile, enhancing immune system function, promoting hair
growth and color change, reducing blood pressure, joint, back and knee
pain, bleeding of the gums, nasal and sinus congestion, and fat, in
particular, hip size, upper arm size and waist size. (I) is also useful
for improving short term memory, reducing the manifestations of anger,
anxiety, depression, social isolation, mood swings and sleeping disorders,
improving vision, removing wrinkles, accelerating wound healing,
facilitating breast enlargement and generally contributing to a feeling of
well-being. (I) may also be useful to treat headaches, AIDS wasting
syndrome, Turner syndrome, osteoporosis, Parkinson's, Alzheimer's disease
and dementia.

ADVANTAGE - (I) is non-toxic, do not produce undesirable side effects

and can be formulated and provided to a large patient population at a reasonable cost by means of delivery systems that are convenient and safe.
Dwg.0/0

L9 ANSWER 10 OF 10 VETU COPYRIGHT 2004 THOMSON DERWENT on STN

ACCESSION NUMBER: 1996-61128 VETU

TITLE: Determination of pre-clinical effects and clinical efficacy of organ preparations.
(Praeklinische wirkungs- und klinische wirksamkeitsnachweise von organpraeparaten)

AUTHOR: Schmid F

LOCATION: Aschaffenburg, Ger.

SOURCE: Tieraerztl.Umsch. (51, No. 2, 63-68, 1996) 4 Fig. 5 Tab. 9 Ref.

CODEN: TIEUA7

AVAIL. OF DOC.: Ziegelbergstrasse 17, 63739 Aschaffenburg, Germany.

LANGUAGE: German

DOCUMENT TYPE: Journal

FIELD AVAIL.: AB; LA; CT

AN 1996-61128 VETU

AB The Author discusses the effects and clinical efficacy of organ preparations, including growth factors, cytokines and peptides, such as osteoinductive factor (OIF), osteogenin, bone morphogenic factor (BMF), transforming growth factor (TGF), bone-derived growth factor (BDGF), platelet-derived growth factor (PDGF), insulin-like growth factor (IGF), nerve growth factor (NGF), brain-derived neuronal factor (BDNF), ciliary neurotrophic factor (CTTF), ganglion/facial motoneurone factors, neurotrophin 3 (NT3), basic fibroblast growth factor (bFGF) and epidermal growth factor (EGF) and various activating factors (interleukins, IL, mitogenic factors, complement components, transferrin), suppressing factors (inhibiting factors, IFN, c-reactive protein, alpha feto protein, fibrinogen), factors of inflammation and direct acting factors.

ABEX Organ preparations include unprepared or processed organs, tissue cells, **homeopathic** preparations, cell fractions and enzymes. Bone-derived growth factors include OIF, osteogenin, BMF-1, 2, 3, TGF-1, 2, alpha/beta FGF, BDGF, PDGF and **IGF-1**, 2. Activating factors include IL-1, 2, 3, complement components, transferrin, mitogenic protein and normal macrophage, C-cell activating, thymus differentiation, mitogenic-blastogenic, T-cell-derived enhancing and thymus-extracted fractions. Suppressing factors include DNA synthesis inhibitors, antibody inhibiting material, soluble immune response suppressor, immunoregulatory alphaglobulin, IFN, alpha feto protein, LDL, c-reactive protein, fibrinogen, normal immunosuppressive protein, low molecular weight suppressor and histamine induced suppressive, T-cell suppressive, lymphoblastogenesis inhibiting, feedback inhibiting and migration inhibition factor (MIF)-inhibiting factors. Growth factors affecting nerve tissue include NGF, BDNF, CNTF, ciliary ganglion/facial nerve motoneurone factors, NT3, PDGF, bFGF and EGF. Factors of inflammation include pyrogens, slow reacting substance of allergy, TX, PG, LT, IFN, MIF, macrophage activating/enhancement factors, fibroblast activating factor, eosinophil stimulation promotor and various blood cell inhibition and chemotactic factors. Direct acting factors include lysosomal enzymes, lymphotoxin, (macrophage) cytotoxic factor, adherent cell toxin, microbial factors, leucoregulin, and macrophage cytolytic, proliferation inhibiting, cloning inhibition and tumor necrosis factors.
